Professional Summary

GATE-qualified fresher (Data Science & AI, 2026) with hands-on experience building and deploying **LLM-powered and deep learning applications** — from a RAG-based medical chatbot using LangChain and FAISS to a CNN-LSTM classifier deployed as a production Flask app. Comfortable working across the **full GenAI stack**: vector databases, retrieval pipelines, language model integration, and end-to-end deployment. Strong foundations in **NLP, deep learning, and Python**, with a bias for shipping working systems.

Education

B.Tech, Electronics and Communication Engineering

2022 – 2026

Roorkee Institute of Technology

GATE Qualified — Data Science & AI (2026)

CBSE Class XII — Central Academy, Chittorgarh

2022 — 91.6%

Technical Skills

- **GenAI & LLM:** LangChain, FAISS, Hugging Face Transformers, RAG, Vector Embeddings, Semantic Search, Prompt Engineering
- **ML / DL Frameworks:** TensorFlow, Keras, scikit-learn, PyTorch (basic), NLTK, OpenCV
- **Languages & Data:** Python, SQL, C++; Pandas, NumPy, Matplotlib, Seaborn, Power BI
- **Deployment & Tools:** Docker, Flask, AWS S3, Git & GitHub, Linux (CLI), Jupyter Notebook
- **Concepts:** CNNs, LSTMs, Transformer Architecture, NLP, Feature Engineering, Model Evaluation (F1, ROC-AUC, Precision-Recall)

Projects

Medical Chatbot — RAG-Based Q&A System *LangChain — FAISS — Hugging Face — LLMs — Flask*

- Built a **RAG pipeline** for medical Q&A; chunked documents into **vector embeddings** stored in a **FAISS vector database** and implemented **semantic search** via LangChain to ground LLM responses in source documentation, reducing hallucination.
- Integrated **Hugging Face** language models into the retrieval pipeline; deployed the full system as a **Flask web application** with a conversational chatbot UI.

Signalize — Deep Learning Classifier

CNN-LSTM — TensorFlow — Keras — Flask

- Trained a **CNN-LSTM hybrid model** on **220K+ samples**, achieving **90%+ accuracy** under real-world noise conditions; built end-to-end pipeline from preprocessing to hyperparameter tuning with early stopping callbacks.
- Deployed as a **Flask web application** with a real-time interactive UI; managed virtual environments and cross-platform compatibility end-to-end.

IMDb Sentiment Analysis

Python — NLP — TF-IDF — NLTK — scikit-learn

- Built a sentiment classifier on **50K+ reviews** using **TF-IDF** with Logistic Regression, achieving **89% accuracy**; implemented full NLP preprocessing pipeline: tokenization, stopword removal, and lemmatization via **NLTK**.

Lung Disease Classification — Medical Image CNN

TensorFlow — Keras — CNN

- Developed a **CNN classifier** for lung disease detection from chest X-rays; applied **data augmentation** to improve generalization on limited medical data, achieving **92% accuracy**.

Fraud Detection System

Python — XGBoost — scikit-learn — imbalanced-learn

- Built a fraud classifier on **284K+ transactions**; applied **SMOTE** for class imbalance and achieved **90% F1-score** using XGBoost with custom probability threshold tuning.

Work Experience

Data Science Intern — InternBoot

Jun 2025 – Sep 2025

- Built and evaluated classification models using **scikit-learn and Pandas**; performed EDA, feature selection, and cross-validation with automated preprocessing pipelines to streamline ETL workflows.
- Delivered metric-backed findings through Matplotlib/Seaborn visualizations in weekly team reviews.

Marketing Analytics Intern — Corizo

2024

- Analyzed campaign data using Python and Excel; built KPI dashboards and applied statistical segmentation to surface actionable targeting insights.

IoT Intern — Y-Hills

Oct 2023 – Nov 2023

- Configured IoT hardware and validated real-time sensor data transmission over TCP/IP; documented setup procedures for team handover.

Certifications & Achievements

- **GATE Qualified** — Data Science & Artificial Intelligence (2026)
- Data Science with Generative AI — Python for Machine Learning — Computer Vision with OpenCV (PW Skills)
